

## **Messe Düsseldorf New Organiser of Saw EXPO**

### **Friedrichshafen and Düsseldorf Alternating Locations**

As of now Messe Düsseldorf GmbH will act as organiser of Saw EXPO, the special-interest trade fair for the sawing sector, to be held in Friedrichshafen every two years. “With this move Messe Düsseldorf will take over the trade fair for sawing and industrial cutting as manufacturing technologies, which perfectly fits in with the growing Metals and Flow Technologies portfolio,” delights Friedrich-Georg Kehrer, Global Portfolio Director at Messe Düsseldorf.

From 8 to 11 June 2021 Saw EXPO will be held in Friedrichshafen for the first time. “This is an ideal destination since many producers come from the South of Germany and the neighbouring countries of Switzerland, Austria and Italy,” explains Daniel Ryfisch, Deputy Director of the Global Portfolio Metals and Flow Technologies who is responsible for holding Saw EXPO.

The Lake Constance region is one of Europe’s most innovative economic regions – this is where SMEs work alongside traditional family-owned businesses, rubbing shoulders with global players in the world economy.

Stefan Motte (initiator and owner of the portals “Sägebörse” and “Sägemanagement”) deliberately cooperates with the trade fair organisers from the Rhine as they can look back on 70 years of successful exhibitions both at home and abroad. In Stefan Motte the Düsseldorf organisers have a proven expert by their side who boasts several years of expertise in the saw sector under his belt and who will continue supporting Saw EXPO with his know-how and thorough knowledge of this industry.

In even years Saw EXPO will always be held as part of Tube Düsseldorf in Düsseldorf from 2020. It will be organised as a special pavilion for sawing and cutting in Hall 6 of the Düsseldorf exhibition centre.

For autumn 2020 the first spin-off is already scheduled to feature as part of Tube China 2020 in Shanghai.

Sawing, slitting and industrial cutting are indispensable to many manufacturing processes but they play an especially prominent role in tube technology. Tubes of various materials such as steel, aluminium, iron and non-ferrous metals, plastics, wood and composites are sized this way and adapted to various industrial applications.

At Saw EXPO in June 2021 in Friedrichshafen organisers expect manufacturers of sawing machines and alternative cutting technologies, sawing tools, trowel equipment, deburring tool suppliers and producers of accessories and consumables. The ranges on display are complemented by peripheral machinery and systems as well as service providers, saw jobbers, second-hand machinery, associations, publishing houses and the science and research arena.

On the visitor side the trade fair addresses the users of sawing and cutting processes – regional, national and international. These come from metal working, metal processing, steel trade, from mechanical engineering, automotive, the chemical and pharmaceutical industries, the pipe industry, from recycling, fenestration and from warehousing and logistics companies.
